Overview

Software Engineer with 3+ years of experience designing, developing, and maintaining scalable, high-performance software applications using Python, Node.js, TypeScript, AWS, MongoDB, Redis, and microservices architecture. Experienced in software design, RESTful APIs, distributed systems, cloud deployments, CI/CD pipelines, and production support. Strong understanding of SDLC, Agile methodologies, object-oriented programming principles, and scalable system design. Proven ability to collaborate with product managers, architects, QA teams, and cross-functional stakeholders to deliver reliable enterprise-grade solutions.

Technical Skills

Backend Technologies: Node.js, TypeScript, JavaScript, NestJS, Express.js, REST APIs, Microservices, WebSockets (Socket.io), RabbitMQ

Artificial Intelligence: AI, RAG, LLM, MCP, n8n, OpenAI API

Databases: MongoDB, MongoDB Atlas, Redis (Caching, Pub/Sub), MySQL, PostgreSQL

Cloud & DevOps: Lambda, AWS EC2, AWS S3, Route53, Linux, Nginx, GitHub Actions, CI/CD Pipelines

Architecture: Event-Driven Architecture, Distributed Systems, Asynchronous Processing, Redis Pub/Sub, API Integrations

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS

Experience

Software Developer, Blocsys

April 2025 – May 2026

- Designed, developed, and maintained scalable backend applications and RESTful APIs using NestJS, TypeScript, MongoDB, and Redis.
- Collaborated with product managers, architects, QA teams, and developers to gather requirements and deliver high-quality software solutions.
- Participated in software design discussions, architecture reviews, and technical decision-making processes.
- Developed microservice-based systems and event-driven workflows using Redis Pub/Sub, improving application scalability and reliability.
- Integrated external APIs and AI services to automate business processes and enhance platform capabilities.
- Conducted debugging, troubleshooting, and root-cause analysis for production incidents, improving system stability.
- Performed code reviews and contributed to coding standards, maintainability, and software quality improvements.
- Supported CI/CD deployments and cloud-hosted environments using AWS, Docker, Linux, Nginx, and PM2.
- Optimized application performance through database tuning, caching strategies, and efficient backend design.

Software Developer, Karmacts Systems Pvt. Ltd.

Dec 2022 – March 2025

- Designed and developed enterprise-grade software applications using Python, FastAPI, Flask, Django-REST Node.js, NestJS, TypeScript, MongoDB, and React.js.
- Built scalable microservices and distributed backend systems supporting CRM, workflow automation, and business process management platforms.
- Developed RESTful APIs, reusable backend services, and asynchronous processing systems using RabbitMQ and Redis.
- Collaborated with product teams, QA engineers, stakeholders, and clients throughout the software development lifecycle.
- Participated in Agile ceremonies including sprint planning, stand-ups, retrospectives, and release planning.
- Conducted code reviews and implemented best practices to improve maintainability, scalability, and software quality.
- Optimized database queries, caching layers, and backend services, significantly improving application performance and response times.
- Investigated and resolved production issues through log analysis, debugging, monitoring, and root-cause analysis.

- Contributed to architecture discussions, technical design reviews, and system scalability initiatives.
- Built and maintained CI/CD deployment workflows and cloud-hosted applications on AWS infrastructure.
- Mentored junior developers and supported knowledge-sharing initiatives within engineering teams.

Projects

KMS CRM Platform

- Designed and developed a comprehensive CRM platform to streamline lead management, sales operations, customer interactions, and business workflows.
- Built Lead, Deal, Quotation, Product, Task, Call, and Meeting management modules with role-based access control and dynamic user permissions.
- Implemented real-time communication and activity tracking using WebSockets, enabling live updates for calls, meetings, notifications, and activity timelines.
- Developed Kanban-based task management with drag-and-drop workflow visualization, status tracking, and team collaboration features.
- Created advanced reporting and analytics dashboards with performance metrics, sales pipeline insights, lead conversion analysis, and business intelligence visualizations.
- Optimized dashboard and CRM performance through efficient database indexing, query optimization, caching strategies, and backend performance enhancements, reducing response times and improving scalability.
- Built quotation and deal revision management systems with complete audit trails and version tracking for improved business process transparency.
- Implemented lead scoring and rating mechanisms to prioritize opportunities based on business-defined evaluation criteria.
- Developed dynamic rights management and data access controls to ensure data privacy, multi-level authorization, and secure collaboration among teams and sub-admin users.
- Led architecture design, backend development, API integrations, deployment, and production support while collaborating with cross-functional teams to deliver scalable enterprise solutions.
- **Technologies:** NestJS, Node.js, TypeScript, React.js (Vite), MongoDB, Socket.IO, RabbitMQ, Redis, AWS EC2, Nginx, PM2, Tailwind CSS

V2 — AI-Driven Development: Agentic Vaults & Policy Engine

- Designed and developed scalable RESTful APIs using NestJS, TypeScript, and MongoDB to support policy management and workflow automation processes.
- Implemented user management, authentication, and role-based access control (RBAC) modules using JWT-based security mechanisms.
- Built policy lifecycle management features, including policy creation, approval workflows, status tracking, and operational process automation.
- Developed microservice-based components and integrated third-party services to streamline business workflows and improve operational efficiency.
- Implemented asynchronous background processing and inter-service communication using Redis Pub/Sub for reliable workflow execution.
- Designed and optimized database schemas, queries, and backend logic to enhance application performance and scalability.
- Developed audit logging and activity tracking mechanisms to improve system transparency and compliance monitoring.
- Assisted in application deployment and maintenance using Docker, Linux, Nginx, PM2, and Hostinger Server.
- **Technologies:** NestJS, MongoDB, Redis, Hostinger Server, Cloudflare, Nginx, PM2

Education

Zeal Institute of Business Administration, Computer Application and Research, Master of Computer Applications (MCA) August 2022 – April 2024

CGPA: 7.39 | **Awards:** Third Prize at CodeSprint - National Level Hackathon, St. Aloysius University, Mangalore
